

HAILEA AIR DIVIDER-

SKU: AD4, AD8

Hailea offers a range of air dividers, also known as air distribution manifolds, designed to efficiently manage airflow from a single air pump to multiple outputs. These dividers are particularly useful in hydroponic systems, aquariums, and ponds where uniform oxygenation is essential.

Product Features:

- **Multiple Outlets:** Hailea's air dividers come in various configurations, including 6, 8, 10, 16, and 26 outlets, allowing users to distribute air to multiple devices such as air stones or nutrient delivery points.
- **Durable Construction:** Made from robust materials, these manifolds ensure long-lasting performance and reliability.
- **Standard Compatibility:** Designed to connect easily with standard tubing sizes, facilitating straightforward integration into existing systems.
- **Efficient Airflow Management:** By splitting the airflow from a single pump, these dividers help maintain consistent oxygen levels across different sections of your system.

For instance, the Hailea 8 Way Plastic Air Divider is a popular choice for those needing to manage airflow to multiple outputs.
